

The bidder dashboard lacks properties and daily sales tab which allow the user to view regular sold commodities and properties like land and buildings. The two tab should have search functionalities that allow registered bidder to either search for a good they are looking for across the different auctioneers registered on the system. The properties tab should do the same allow them to search for properties by location.

When it comes to live auctions the user is required to first pay a bidding fee then upon confirmation they are required to pay a security deposit which acts as a guarantee that the user will honour their bid. Therefore upon joining a desired auction the system should carry out the payment a series of steps first with the payment of the bidding fee secondly they will pay a security deposit to participate in the auction. Then upon confirmation of both payments the system will direct them to the auction room.

On the auctioneer side, the live auction control tab should be renamed manage auctions whereby all auction listings should be made through this tab and all other controls regarding this section should be made through this section. Similar with the manage listings tab the auctioneer should be able to view two columns one for daily sales and another for properties where all listings made for each section can be managed under its respective column. The section should have an add listings button that redirects to a given form for collecting the necessary fields.

On the landing page, after the hero section there should follow with the daily sales section, then the properties section,
