

On the auctioneer dashboard, for the scheduling form the physical location should be renamed to client name, under the financial framework the security deposit should be renamed to entry fee which will be the actual fee needed to participate in the auction, and the bidding fee will be the actual money the bidder will be using during the auction as they bid in other words it will be the security deposit. For the daily sales listing form we need to remove the legal document link field. The property listing field we need to have two types of listings whereby the properties can be listed either for lease and for sale whereby if it's listed for lease the property should displayed as for lease with the associated charges per month and the system should send automatic reminders that the rent is due the following months. If it's listed for sale it should display the asking price. The payments tab should allow the auctioneer to view all the payment the have received from daily sales property and auctions which include bidding fees and entry fee

An additional tab for the auctioneer for report on sales which could include revenues different good sold and other relevant info to report

For the bidder dashboard under auctions tab remove the search tab as all auction listing will be listed on the window on the pay tab should be renamed to receipts where the customer can be able to view the for either property purchases and daily sales purchases for the daily sales section we need a add cart button where we can add multiple goods being purchased. We also need filter for price range like min and max price
